

Tigo Energy Premium Monitoring

Tigo Energy provides module-level monitoring for unprecedented accuracy and insight into PV systems. The software shows module-level performance and helps to easily identify problems such as diode failure, soiling, or wiring faults. This streamlines O&M and improves ROI.

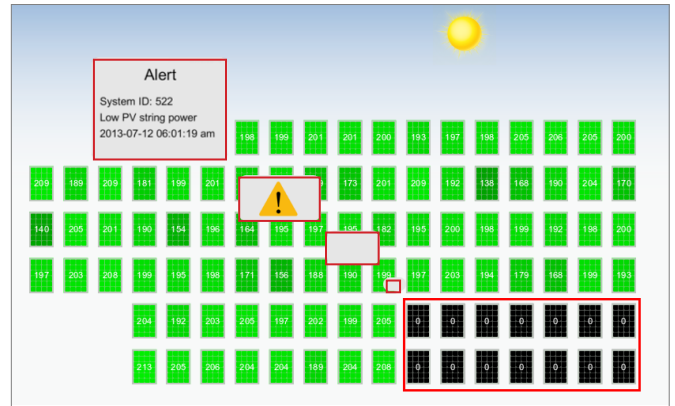

Charts & Graphs

Tigo Energy's software presents intuitive visualizations of system performance with dynamic charts and graphs. The cloud based platform provides system data like voltage, current and power to be easily accessible from anywhere.

Alerts & Notifications

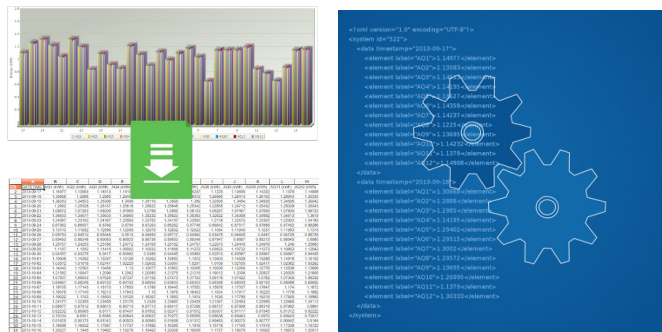

The software detects problems immediately and sends email and SMS messages. Real-time alerts are triggered when strings or modules underperform or fail, empowering owners to perform efficient maintenance and contributing to a lower cost of ownership.

Download, Report & Integrate

Data can be downloaded and stored by day, week, month or year. The software can also integrate inverter data, AC meters or any MODBUS protocol device.
